

PROVIDING PROGRAMMING INFORMATION IN RESPONSE TO SPOKEN REQUESTS

Abstract of the Disclosure

5 A system allows a user to obtain information about television programming and to make selections of programming using conversational speech. The system includes a speech recognizer that recognizes spoken requests for television programming information. A speech synthesizer generates spoken responses to the spoken requests for television programming information. A user may use a voice user interface as well as a graphical user interface to interact with the system to facilitate the selection of programming choices.
